Indentation, in particular, instrumented nanoindentation has become an elegant and effective technique for probing materials behavior at nanoscales and up. Following the highly successful International Indentation Workshops I, II, III held at University of Cambridge, and Workshop IV at Seoul National University, we are now organizing the Fifth International Indentation Workshop (IIW5) at The University of Texas at Dallas (UTD). IIW5 will provide a forum for scientists and engineers working on indentation at different scales to report their new findings and exchange ideas. It will also give an opportunity for equipment manufacturers to showcase their most advanced equipment for scientific discovery. The IIW5 will be held on UTD campus on November 1-5, 2015. A collection of papers documenting original contributions will be published in a Special Issue – Recent Advances in Nanoindentation in Experimental Mechanics.
